**Research Data Management in the Research Process: From Student  
Research Projects to Data Organization and Publication**

Research data management is an integral part of the research process, from the first student project to the publication of results. The talk introduces key aspects of working with research data in a structured and sustainable way, including planning, organizing, documenting, licensing, and sharing data. It offers an overview of how good research data management can support academic work at different stages of study and research.
